

## TABLE OF CONTENTS

|           |                                                                                                                                                                                                                                                                                             |                |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>01</b> | <b>Le Van Bao, Nguyen Quang Vinh, Pham Cong Tu</b><br>Direction estimation and tracking of rapidly moving RF emitters.                                                                                                                                                                      | <b>3 – 12</b>  |
| <b>02</b> | <b>Hoang Duc Long</b><br>Adaptive observer-based sliding mode control with time-varying learning using Riccati gain synthesis for robotic manipulators.                                                                                                                                     | <b>13 – 23</b> |
| <b>03</b> | <b>Dao Van Ba, Nguyen Viet Phuong</b><br>Smooth robust adaptive sliding mode control of 2-DOF helicopter system.                                                                                                                                                                            | <b>24 – 31</b> |
| <b>04</b> | <b>Pham Tuan Hung, Nguyen Duc Cuong, Tran Ngoc Binh</b><br>Improving the impact point accuracy of unpowered flight vehicles under uncertain wind conditions by using parameter-based adaptive control.                                                                                      | <b>32 – 41</b> |
| <b>05</b> | <b>Le Duy Binh, Hoang The Vu, Pham Van Khuong, Nguyen Van Hung, Dam Duc Trung, Le Van Minh</b><br>Study on the synthesis of tetraglycidyl 4,4'-diamino-3,3'-chloro-diaminodiphenyl methane and application as an adhesive for flame-retardant cover and solid propellant rod.               | <b>42 – 50</b> |
| <b>06</b> | <b>Mai Van Phuoc, Le Thi Phuong Thao</b><br>Effect of CeO <sub>2</sub> and CuO oxide nanoparticles on the nickel electroplating in sulfate solution.                                                                                                                                        | <b>51 – 57</b> |
| <b>07</b> | <b>Pham Hong Thach, Phu Phuoc Huy, Pham Trung Kien, Tran Van Nguyen, Tran Trong Viet, Ngo Huynh Thi Dinh, Tran Van Khai, Nguyen Nhi Tru</b><br>Research on enhancing the corrosion resistance of epoxy-modified Fe <sub>3</sub> O <sub>4</sub> coating on steel in a 3.5% NaCl environment. | <b>58 – 67</b> |
| <b>08</b> | <b>Pham Hong Tuan, Nguyen Van Dung, Nguyen Nhat Huy, Le Anh Kien</b><br>Removal of methyl orange from aqueous solution by heterogeneous Electro-Fenton process using MnFe <sub>2</sub> O <sub>4</sub> /C catalyst.                                                                          | <b>68 – 77</b> |
| <b>09</b> | <b>Dinh The Dung, Nguyen Tran Hung, Le Huu Thanh, Pham Trung Kien, Vu Tri Thien</b><br>Research on the fabrication of camouflage coating based on Cr <sub>2</sub> O <sub>3</sub> material.                                                                                                  | <b>78 – 86</b> |
| <b>10</b> | <b>Lai Thanh Tuan, Dang Thanh Dat, Nguyen Thai Dung, Nguyen Quang Hiep, Le Van Nhu</b><br>Design and optimization of axial length in a -1× magnification image-inverting optical system.                                                                                                    | <b>87 – 94</b> |

- 
- |           |                                                                                                                                                                      |                  |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>11</b> | <b>Ngo The Vinh, Tran Thu Trang</b>                                                                                                                                  | <b>95 – 104</b>  |
|           | Effect of laser peak power on LIDAR's ability to detect UAVs under changing atmospheric conditions.                                                                  |                  |
| <b>12</b> | <b>Nguyen Hung An, Vu Duy Dong</b>                                                                                                                                   | <b>105 – 113</b> |
|           | Enhancing the accuracy of rainfall area classification in central Vietnam using machine learning methods.                                                            |                  |
| <b>13</b> | <b>Nguyen Kim Tuan, Hoang Duc Tho, Nguyen Thi Phuong Hang, Pham Van Quoc, Luu Hong Dung</b>                                                                          | <b>114 – 125</b> |
|           | The quantum-resistant digital signature schemes based on new hard problems.                                                                                          |                  |
| <b>14</b> | <b>Nguyen Minh Kha, Dao Manh Quyen</b>                                                                                                                               | <b>126 – 133</b> |
|           | Optimization of overhead crane main girder considering deflection constraint using differential evolution.                                                           |                  |
| <b>15</b> | <b>Lai Thanh Tuan, Bui Xuan Tung, Do Ngoc Tien</b>                                                                                                                   | <b>134 – 144</b> |
|           | Investigating the effect of the gap between the throttling ring and the control rod in the hydraulic braking mechanism on the stability of the cannon during firing. |                  |
| <b>16</b> | <b>Nguyen Trung Thanh, Phan Huy Anh, Nguyen Thi Thu Hong, Pham Thanh Thuong</b>                                                                                      | <b>145 – 148</b> |
|           | Research on the design of a subsystem to connect and control multiple unmanned aerial vehicles simultaneously via the MAVLink protocol.                              |                  |
